Appl. No.: 10/696,475 TC/A.U.: 3711 Docket No.: B03-61 Reply to Office Action of September 30, 2004

## LISTING OF CLAIMS

Please amend the claims as follows:

- 1. (Amended) A golf ball comprising a core, a water vapor barrier layer and a cover, wherein the water vapor barrier layer has a moisture vapor transmission rate that is lower than that of the cover and the water vapor barrier layer comprises a non-ionomeric terpolymer of ethylene, a softening acrylate class ester such as methyl acrylate, n-butyl-acrylate or iso-butyl-acrylate, and a carboxylic acid such as acrylic acid or methacrylic acid.
- 2. (Original) The golf ball set forth in claim 1, wherein the terpolymer is a terpolymer of ethylene, methyl acrylate and acrylic acid.
- 3. (Original) The golf ball as set forth in claim 1, wherein the acid level by weight in the terpolymer is in the range of about 3 % to about 25%.
- 4. (Original) The golf ball as set forth in claim 3, wherein the acid level by weight in the terpolymer is in the range of about 4 % to about 15%.
- 5. (Original) The golf ball as set forth in claim 4, wherein the acid level by weight in the terpolymer is in the range of about 7 % to about 11%.
- 6. (Original) The golf ball set forth in claim 1, wherein the terpolymer has a melt flow index in the range between about 1gram/10 minutes to about 500 grams/10 minutes.
- 7. (Amended) The golf ball set forth in claim 6, wherein the melt flow index of the terpolymer is in the range of about [[3]] 5 grams/10 minutes to about [[60]] 20 grams/10 minutes.
- 8. (Cancelled).

Appl. No.: 10/696,475 TC/A.U.: 3711 Docket No.: B03-61 Reply to Office Action of September 30, 2004

- 9. (Cancelled).
- 10. (New) A golf ball comprising a core, a water vapor barrier layer and a cover, wherein the water vapor barrier layer has a moisture vapor transmission rate that is lower than that of the cover and the water vapor barrier layer comprises a blend of a terpolymer of ethylene, a softening acrylate class ester, and a carboxylic acid having a melt flow index in the range of about 5-20 g/10 min and a copolymer of ethylene and acrylic acid having a melt flow index of 300g/10 min or higher.
- 11. (New) The golf ball set forth in claim 10, wherein the terpolymer is a terpolymer of ethylene, methyl acrylate and acrylic acid.
- 12. (New) The golf ball as set forth in claim 10, wherein the acid level by weight in the terpolymer is in the range of about 3 % to about 25%.
- 13. (New) The golf ball as set forth in claim 10, wherein the acid level by weight in the copolymer is in the range of about 3 % to about 20.5%.
- 14. (New) The golf ball as set forth in claim 10, wherein the terpolymer is present in an amount of about 25%, 50% or 75% and the copolymer is present in an amount of about 75%, 50% or 25%.
- 15. (New) A golf ball comprising a core, a water vapor barrier layer and a cover, wherein the water vapor barrier layer has a moisture vapor transmission rate that is lower than that of the cover and the water vapor barrier layer comprises a blend of a terpolymer of ethylene, a softening acrylate class ester, and a carboxylic acid having a melt flow index in the range of about 5-20 g/10 min and a non-ionomeric copolymer of ethylene and methacrylic acid.
- 16. (New) The golf ball as set forth in claim 15, wherein the terpolymer is present in an amount of about 25%, 50% or 75% and the non-ionomeric copolymer is present in an amount of about 75%, 50% or 25%.
